

Overview of Energy Performance Metrics

This dataset provides a comparative analysis of six distinct energy production methods: **Solar, Wind, Hydro, Geothermal, Biomass, and Nuclear**.

Energy Method	Energy Usage	Carbon Footprint	Cost per Unit	Maintenance Cost	Effectiveness (%)
Solar Panels	0.15	0.05	0.40	0.10	85%
Wind Turbines	0.30	0.10	0.35	0.20	75%
Hydro Power	0.25	0.20	0.30	0.25	90%
Geothermal	0.40	0.15	0.50	0.30	80%
Biomass	0.35	0.30	0.45	0.30	70%
Nuclear	0.20	0.25	0.40	0.35	95%

$$lrate = d_{\text{model}}^{-0.5} \cdot \min(step_num^{-0.5}, step_num \cdot warmup_steps^{-1.5})$$
